Report no. 200500779SHA-001

Applicant : Suzhou Pineapple Health Technology Co., Ltd.

No. 1, Guantang Road, Xiangcheng District, Suzhou, Jiangsu, China

Manufacturer : Same as applicant

Manufacturing site : Same as applicant

Summary

The equipment complies with the requirements according to the following standard(s) or Specification:

EN 55014-1:2017: Electromagnetic compatibility - Requirements for household appliances, electric tools and similar apparatus Part 1: Emission

EN 55014-2:2015: Electromagnetic compatibility - Requirements for household appliances, electric tools and similar apparatus Part 2: Immunity – Product family standard

EN 61000-3-2:2014: Electromagnetic compatibility (EMC) - Part 3-2: Limits - Limits for harmonic current emissions (equipment input current ≤ 16A per phase)

EN 61000-3-3:2013: Electromagnetic compatibility (EMC) - Part 3-3: Limits - Limitation of voltage changes, voltage fluctuations and flicker in public low-voltage supply systems, for equipment with rated current \leq 16A per phase and not subject to conditional connection

1. GENERAL INFORMATION

1.1 Description of Equipment Under Test (EUT)

Product name : Hand held massager

Type/Model : BOOSTER MINI

Description of EUT : The product covered in this report is a battery-operated hand held massager intended for household indoor use only. The battery is only to be recharged in the product. Charging model and motor operating mode were tested, and the worst data has been listed as representative.

Rating : 5VDC, 2A, Class III

Brand name : BOOSTER

Mains lead : (un)shielded, (non)detachable

Data cable : none

EUT type :
Table-top
Floor standing

2. TEST SPECIFICATIONS

2.1 Normative Standards

IEC 61000-4-2:2008: Electromagnetic Compatibility (EMC) – Part 4-2: testing and measurement techniques – electrostatic discharge immunity test

IEC 61000-4-3:2006+A1:2007+A1:2010: Electromagnetic Compatibility (EMC) — Part 4-3: testing and measurement techniques — radiated, radio frequency, electromagnetic field immunity test

IEC 61000-4-4:2012: Electromagnetic Compatibility (EMC) — Part 4-4: testing and measurement techniques — electric fast transient/burst immunity test

IEC 61000-4-5:2014: Electromagnetic Compatibility (EMC) – Part 4-5: testing and measurement techniques – section 5: surge immunity test

IEC 61000-4-6:2013: Electromagnetic Compatibility (EMC) — Part 4-6: testing and measurement techniques — section 6: immunity to conducted disturbance, induced by radio frequency field

IEC 61000-4-11:2004: Electromagnetic Compatibility (EMC) — Part 4-11: testing and measurement techniques —voltage dips, short interruption and voltage variations immunity test

IEC 61000-4-22:2010, Electromagnetic compatibility (EMC) – Part 4-22: Testing and measurement techniques – Radiated emissions and immunity measurements in fully anechoic rooms (FARs)

Note: there are no magnetic sensitive components included in this EUT and magnetic field immunity test according to EN 61000-4-8 is therefore not required.

2.2 Mode of operation during the test

Within this test report, EUT was tested under all available operation models and tested under its rating voltage and frequency. Other voltage and frequency is specified if used.

6. Radiated emission

Test result:

PASS

As for in the disturbance power test all emission readings from the EUT are lower than the applicable limits (Table 7) reduced by the margin (Table 8) and the maximum clock frequency is less than 30MHz, the EUT is deemed to comply with the Radiated Emission requirement without test.

6.1 Limit

 - 2. The gray rows are selected items.

6.2 Block diagram and test set up

The measurement was applied in a semi-anechoic chamber.

Operation conditions of EUT was according to clause 6 of EN 55014-1.

Measurement was performed according to clause 10 of CISPR 32.

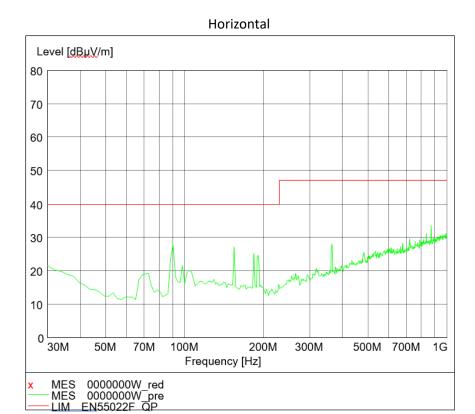

Setting of EUT is according to clause 5.3.4.3 of EN 55014-1.

The bandwidth setting on test receiver was 120kHz.

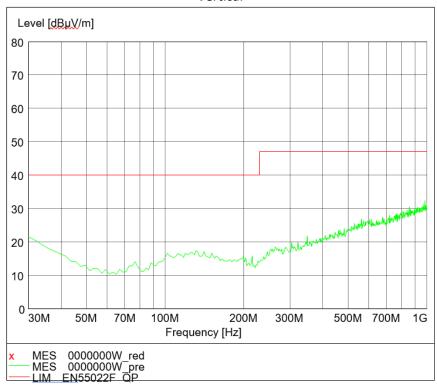

The frequency range from 30MHz to 300MHz was checked.

6.3 Test Protocol

Remark: 1. Correct Factor = Antenna Factor + Cable Loss (+ Amplifier, for higher than 1GHz), the value was added to Original Receiver Reading by the software automatically.

- 2. Corrected Reading = Original Receiver Reading + Correct Factor
- 3. Margin = Limit Corrected Reading
- 4. If the PK Corrected Reading is lower than AV limit, the AV test can be elided.

Example: Assuming Antenna Factor = 30.20dB/m, Cable Loss = 2.00dB,

Gain of Preamplifier = 32.00dB, Original Receiver Reading = 10.00dBuV,

Limit = 40.00dBuV/m.

Then Correct Factor = 30.20 + 2.00 - 32.00 = 0.20dB/m; Corrected Reading = 10dBuV + 0.20dB/m = 10.20dBuV/m;

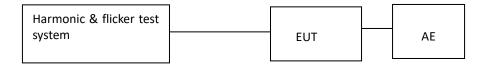

Margin = 40.00dBuV/m - 10.20dBuV/m = 29.80dB.

7. Harmonics

Test result: **PASS**

7.1 **Block Diagram of Test Setup**

7.2 **Test Setup and Test Procedure**

Harmonics of the fundamental current were measured up to 40 order harmonics using a digital power meter with an analogue output and frequency analyser which was integrated in the harmonic

	er test system. The measurements were carried out under steady conditions.
	Measuring instrumentation according to IEC 61000-4-7:2002+A1:2008
\boxtimes	This product is not defined as lighting equipment, and has rated power less than 75W, therefore, no limit apply according to EN 61000-3-2
	The EUT is kitchen machines as listed in the scope of IEC 60335-2-14, therefore, is deemed to conform to the harmonic current limits of this standard without further testing.

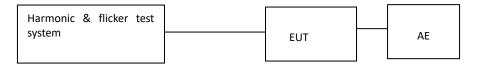

7.3 Test Protocol

8. Voltage Fluctuations-Flicker

Test result: PASS

8.1 Block Diagram of Test Setup

8.2 Test Setup and Test Procedure

8.2.1 Definition

Flicker: impression of unsteadiness of visual sensation induced by a light stimulus whose luminance

or spectral distribution fluctuates with time.

Pst: Short-term flicker severity.

Plt: long-term flicker severity.

dc: maximum steady state voltage change during an observation period.

dmax: maximum absolute voltage change during an observation period.

d(t): time function of the relative r.m.s. voltage change evaluated as a single value for each

successive half period between zero-crossings of the source voltage, except during time

interval in which the voltage is a steady-state condition for at least 1s.

8.2.2 Test condition

The EUT was set to produce the most unfavorable sequence of voltage changes.

8.3 Test Protocol

The tested object operated under the operating condition specified in EN 61000-3-3 The following limits apply

- the value of Pst shall not be greater than 1,0.
- the value of Plt shall not be greater than 0,65.
- Tmax, the accumulated time value of d(t) with a deviation exceeding 3,3 % during a single voltage change at the EUT terminals, shall not exceed 500 ms.
- the maximum relative steady-state voltage change, dc, shall not exceed 3,3 %.
- the maximum relative voltage change dmax, shall not exceed:

4% without additional conditions.
6 % for equipment which is:
 switched manually, or switched automatically more frequently than twice per day, and also has either a delayed restart (the delay being not less than a few tens of seconds), or manual restart, after a power supply interruption. 7 % for equipment which is:
 attended whilst in use (for example: hair dryers, vacuum cleaners, kitchen equipment such as mixers, garden equipment such as lawn mowers, portable tools such as electric drills), or
 switched on automatically, or is intended to be switched on manually, no more than twice per day, and also has either a delayed restart (the delay being not less than a few tens of seconds) or manual restart, after a power supply interruption.
for manual switch, dmax is measured in accordance with Annex B of standard, average dmax is calculated from 24 times measurement.
The rate power of the EUT is no greater than 75W, which is unlikely to produce significant voltage fluctuations or flicker by technical analysis and evaluation. So it is deemed to fulfil the requirements without testing.

Immunity Test

Performance criteria

Categories of apparatus

The performance criteria are based on the general criteria of the standard and derived from the product specification

Criterion A: Normal Performance within limits specified by the manufacturer, request or purchaser.

Criterion B: Continue to operate as intended after the test. No degradation of performance or loss of function. During the test degradation of performance is allowed, however no change of actual operating state or stored date.

Criterion C: Temporary loss of function is allowed, provided the function is self-recoverable or can be restored by the operation of the controls.

or and approximately
Category I (fulfill the relevant immunity requirements without testing)
Category II (Shall fulfill the tests: ESD, EFT, Inject current, Surge, Dips)
☐ Category III (Shall fulfill the tests: ESD, EM fields*)
Category IV (Shall fulfill the tests: ESD, EFT, Inject current, Surge, Dips, EM fields)
Note: *only applicable to the ride on toys operating with electronic devices.

14. Voltage Dips, Short Interruptions and Voltage Variations Immunity Test

Test result: PASS

14.1 Severity Level and Performance Criterion

14.1.1 Test level

Test level	Voltage dip and short interruptions	Duration (in period)	
% U _T	% U _⊤	50Hz	60Hz
0	100	0.5 cycle	0.5 cycle
40	60	10 cycles	12 cycles
70	30	25 cycles	30 cycles

Notes:

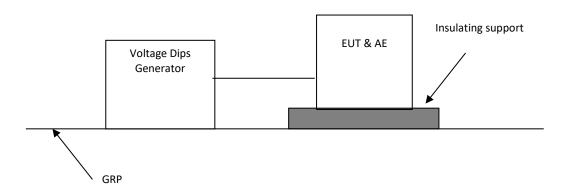

- 1."*" for 0.5 period, the test shall be made in positive and negative polarity, i.e. starting at 0° and 180° , respectively.
- 2. "**" means "x" is an open duration. This duration can be given in the product specification. Utilities in Europe have measured dips and short interruptions of duration between ½ a period and 3000 periods, but duration less than 50 periods are most common.
- 3. If the EUT is tested for voltage dips of 100%, it is generally unnecessary to test for other levels for the same durations. However, for some cases (safeguard systems or electro-mechanical devices) it is not true. The product specification or product committee shall give an indication of the applicability of this note.
 - 4. The gray rows are selected test level.

14.1.2 Performance Criterion

Performance criterion: C

14.2 Block diagram of test setup

14.3 Test Setup and Test Procedure

Measurement was performed in shielded room.

Measurement and setting of EUT was applied according to IEC 61000-4-11 clause 7.

The test method and equipment was specified by IEC 61000-4-11 with additions and modifications by EN 55014-2 clause 5.7.

14.4 Test Protocol

Test no.	% U _T	Voltage dip and short interruptions % UT	Duration (in periods)	Pass/Fail/NA
1	70	30%	25 cycles at 50Hz	Pass
			30 cycles at 60Hz	NA
2	40	60%	10 cycles at 50Hz	Pass
			12 cycles at 60Hz	NA
3	0	100% pos half cycle	0.5 cycle at 50Hz	Pass
			0.5 cycle at 60Hz	NA
4	0	100% neg half cycle	0.5 cycle at 50Hz	Pass
			0.5 cycle at 60Hz	NA

Observation: At test level of 40% and 70%, the EUT worked unsteadily. Once the interference is removed, it recovered its normal mode at once.

Conclusion: The EUT met the requirements of Performance Criterion B.
